No. is the number of results predicted by chance to have a
cover greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

of tumours, such as prostate and breast tumours, in mammals and for modulators of the compounds Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of screen S

Claim 2; Fig 535; 774pp; English.

Separace and SMS1953-ASSIG13; represent the maintenance concept and first primary for PRO pulphyperides of the invention. The separaces of the invention can be used to detect the presence of a the university of the properties of the invention of the use of the invention of the use of the invention in a manual by of Collist from the maintain and a control membry for present cell, askeding a higher term than a minimal and a control membry for present cell, askeding a higher term of cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells and the cells of the cells and the cells and the cells are presented to the cells of the cells and the cells are cells and the cells are cells and the cells are cells and the cells are cells and the cells are cells and the cells are cells and the cells are cells and the cells are cells are cells are cells are cells and the cells are cells

The polypeptides can be used to gitalizate numents exessis factor; (TWB pights "sidises" from human holoco, when contracted with it. A genetic pightspetide can be used to satisfact the profilestor of differentiation of chancomorphic only. Prespectation of many perspectation of the properties on the used to detectine the presence of tunors and also sassophility to tunor development particularly stead of the present in the present of qoats and rabbits but are preferably human. 88888888888888

due to sentor. to maintain organa before transpiration, for seportion call outline of primery tissues, no repenerate tissues, no identify that compare listues to identify that the compare listues and the best week as a food additive or preservative to modify storage properties. The present sequence represents a human secreted protein encoding CDNR of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 189
